North Carolina Youth Risk Behavior Survey
www.nchealthyschools.org
MIDDLE SCHOOL 2011 SURVEY RESULTS
The guiding mission of the North Carolina State Board of Education is that every public school student will graduate from high school, globally competitive for work and postsecondary education and prepared for life in the 21st Century.

In compliance with federal law, NC Public Schools administers all state-operated educational programs, employment activities and admissions without discrimination because of race, religion, national or ethnic origin, color, age, military service, disability, or gender, except where exemption is appropriate and allowed by law.

Inquiries or complaints regarding discrimination issues should be directed to:
Dr. Rebecca Garland, Chief Academic Officer :: Academic Services and Instructional Support
6368 Mail Service Center, Raleigh, NC 27699-6368 :: Telephone: (919) 807-3200 :: Fax: (919) 807-4065

Acknowledgments

The North Carolina Department of Public Instruction (NCDPI) extends its sincere appreciation to all of the students who participated in the 2011 North Carolina Youth Risk Behavior Survey (NCYRBS). Without their responses, statewide monitoring of health risk behaviors among North Carolina youth would not be possible. NCDPI also acknowledges the collaborative and vital contributions of the dozens of school, school district, and local health department personnel from across the state that made it possible to successfully conduct the YRBS. Efforts included allowing their schools to participate in the NCYRBS, attending NCYRBS trainings, coordinating parent permission, administering the surveys, and delivering the resulting data and documentation to NCDPI. The surveys had to be administered during the instructional day and often in more than one class per school. The care and effort put forth by those individuals in going above and beyond their official duties to provide quality data for the NCYRBS are greatly appreciated. Thank you for supporting adolescent health.

The 2011 NCYRBS was conducted by the NCDPI, Healthy Schools Initiative, in collaboration with the North Carolina Department of Health and Human Services (NCDHHS).

NCDPI, Healthy Schools Initiative, provided oversight for the survey development and sampling processes, conducted training of survey administrators, and coordinated all data collection and verification efforts. Karen Ritter, Kritter Solutions was the primary data analyst for the report. Jennifer Toller Erausquin and Sherry Lehman, NCDHHS assisted in editing of this report.

Appendix

2011 North Carolina Youth Risk Behavior Survey – Middle School Questionnaire ................. 97
Executive Summary

In the United States, 74% of all deaths among youth and young adults aged 10–24 years result from four causes: motor-vehicle crashes (30%), other unintentional injuries (16%), homicide (16%), and suicide (12%). Substantial morbidity and social problems also result from the approximately 757,000 pregnancies among women aged 15–19 years, the estimated 9.1 million cases of sexually transmitted diseases (STDs) among persons aged 15–24 years, and the estimated 6,610 cases of human immunodeficiency virus/acquired immunodeficiency syndrome (HIV/AIDS) among persons aged 15–24 years that occur annually. Among adults aged 25 years or older, 59% of all deaths in the United States result from cardiovascular disease (35%) and cancer (24%). These leading causes of morbidity and mortality among youth and adults in the United States are related to six categories of priority health risk behaviors: behaviors that contribute to unintentional injuries and violence; tobacco use; alcohol and other drug use; sexual behaviors that contribute to unintended pregnancy and STDs, including HIV infection; unhealthy dietary behaviors; and physical inactivity. These behaviors frequently are interrelated and are established during childhood and adolescence and extend into adulthood (MMWR, 2010).

To monitor priority health-risk behaviors among youth and young adults in each of these six categories and general health status, overweight and asthma, the 2011 Youth Risk Behavior Survey (YRBS) was produced by the Centers for Disease Control and Prevention (CDC) and modified to meet the needs of North Carolina. This survey is administered at the middle and/or high school level by individual states and select cities in odd-numbered years to coincide with the national high school administration of the YRBS conducted by CDC. The primary purposes of the survey are to monitor trends in health risk behaviors over time, to evaluate the impact of broad efforts to prevent high-risk behaviors, and to provide indicators for improving school health education policies and programs. This report summarizes results from the 77 question 2011 NC Middle School YRBS and trends from 1995-2011 in selected risk behaviors. A random sample of 1,937 middle school students drawn from 37 schools across the state participated in the 2011 NCYRBS. Data from the 2011 Middle School and High School NCYRBS can be found at www.nchealthyschools.org/data/yrbs.

The NCYRBS asks students to identify themselves by gender, age, grade and race/ethnicity. The CDC does not currently implement a national middle school survey for national comparison. This report only summarizes data from North Carolina and makes intra-comparisons for gender, grade level, and race. While behaviors have changed since 1995, this report will focus primarily on statistically significant changes in behavior. Detailed sampling procedures are described on page two of this report.
Health Disparities

The NCYRBS results reveal differences in health status among different sub-groups of adolescents. These differences are categorized by gender, race or ethnicity, geographical region, and grade level. It is important to note that these variables on their own are not intrinsic risks. According to the U.S. Department of Health and Human Services’ Healthy People 2010 report, “Current information about the biologic and genetic characteristics of African Americans, American Indians, Alaska Natives, Asians, Native Hawaiians, and Pacific Islanders does not explain the health disparities experienced by these groups compared with the white, non-Hispanic population in the United States. These disparities are believed to be the result of the complex interaction among genetic variations, environmental factors, and specific health behaviors.” The statistics in this report show disparities among racial/ethnic groups of high school students in North Carolina. However, the report does not suggest that these health disparities are based on race.

GENDER DISPARITIES IN ADOLESCENT RISK TAKING BEHAVIORS

Male students were significantly more likely than female students to:

- Have ever carried a weapon, such as a gun, knife, or club
- Have ever been in a physical fight
- Be physically active for a total of at least 60 minutes per day on 7 of the past seven days
- Have eaten breakfast on all of the past seven days
- Agree or strongly agree they feel good about themselves

Female students were significantly more likely than male students to:

- Have ever been electronically bullied, such as through email, chat rooms, instant messaging, web sites, or text messaging
- Have ever seriously thought about killing themselves
- Be trying to lose weight
- Have ever exercised to lose weight or to keep from gaining weight
- Have eaten less food, fewer calories, or foods low in fat to lose weight or to keep from gaining weight
- Have skipped meals to lose weight or to keep from gaining weight
- Have gone without eating for 24 hours or more to lose weight or to keep from gaining weight
- Feel so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during the past 12 months
- Have parents or other adult in their family to talk with them about what they expect them to do or not to do when it comes to sex

GRADE LEVEL DISPARITIES IN ADOLESCENT RISK TAKING BEHAVIORS

6th grade students were significantly more likely than 8th grade students to:

- Eat breakfast on all of the past seven days
- Get eight hours of sleep on an average school night
- Strongly agree or agree that their teachers really care about them and give them a lot of encouragement

7th grade students were significantly more likely than 6th grade students to:

- Have ever had a drink of alcohol, other than a few sips
- Have ever been taught about AIDS or HIV infection
- Have ever been taught about abstaining from sexual activity
• Have ever been taught about chlamydia, gonorrhea, syphilis, human papillomavirus, or genital warts
• Talk with teachers or other adults in this school when they have questions about sexually transmitted diseases, (STD), HIV, AIDS, or pregnancy prevention
• Have parents or other adults in their family talk with them about what they expect them to do or not to do when it comes to sex

8th grade students were significantly more likely than 6th grade students to:
• Have ever sniffed glue, breathed the contents of spray cans, or inhaled any paints or sprays to get high
• Have ever taken a prescription drug (such as OxyContin, Percocet, Vicodin, codeine, Adderall, Ritalin, or Xanax) without a doctor’s prescription
• Have ever been taught about AIDS or HIV infection
• Have ever ridden in a car driven by someone who had been recklessly speeding
• Report gang activity in their school
• Have been offered, sold, or given an illegal drug on school property during the past 12 months
• Have ever been taught about abstaining from sexual activity
• Have ever been taught about chlamydia, gonorrhea, syphilis, human papillomavirus, or genital warts
• Have parents or other adults in their family talk with them about what they expect them to do or not to do when it comes to sex
• Be alone without a parent or adult three or more house per day on an average school day

8th grade students were significantly more likely than 6th and 7th grade students to:
• Have ever had a drink of alcohol, other than a few sips
• Have ever used marijuana

8th grade students were significantly more likely than 7th grade students to:
• Have ever exercised to lose weight or keep from gaining weight

RACIAL/ETHNIC DISPARITIES IN ADOLESCENT RISK TAKING BEHAVIORS

Students that identify as Black were significantly more likely than students that identify as:

White to:
• Never or rarely wear a helmet when riding a bicycle
• Have ever used marijuana
• Have used marijuana in the past 30 days
• Have tried marijuana for the first time before age 11 years
• Be physically active for a total of 60 minutes on 0 of the past seven days
• Walk or ride their bike to school one or more days per week
• Play video or computer games or used a computer for something that is not school work three or more hours per day on an average school day
• Report gang activity in their school
• Ride their bike to school one or more days per week
• Have an asthma action/management plan on file at school

White or as having an other race to:
• Watch three or more hours per day of TV on an average school day
Having an **other race** to:
  - Have parents or other adults in their family talk with them about what they expect them to do or not to do when it comes to sex

**Hispanic/Latino** or having **multiple races** to:
  - Strongly agree or agree that they feel good about themselves

**Hispanic/Latino, White,** or those who identify as having an **other race** to:
  - Have ever been in a physical fight

*Students that identify as Hispanic/Latino were significantly more likely than students that identify as:*

**Black** or as having an **other race** to:
  - Describe themselves as slightly or very overweight

**Black** to:
  - Eat less food, fewer calories, or foods low in fat to lose weight or to keep from gaining weight

**White** to:
  - Never or rarely wear a seat belt when riding in a car
  - Have ever tried to kill themselves
  - Have their first drink of alcohol other than a few sips before age 11 years
  - Have used any form of cocaine, including powder, crack, or freebase
  - Have ever taken diet pills, powders, or liquids, without a doctor’s prescription to lose weight or keep from gaining weight
  - Have ever vomited or taken laxatives to lose weight or keep from gaining weight
  - Watch three or more hours per day of TV on an average school day
  - Not go to school because they felt they would be unsafe at school or on their way to or from school during the past 30 days
  - Report gang activity in their school
  - Ride their bike to school one or more days per week

Having an **other race** to:
  - Be trying to lose weight

*Students that identify as White were significantly more likely than students that identify as:*

**Black** or **Hispanic/Latino** to:
  - Have ever been electronically bullied
  - Be physically active for a total of 60 minutes per day on five or more of the past seven days

**Black** to:
  - Have ever carried a weapon, such as a gun, knife, or club
  - Eat less food, fewer calories, or foods low in fat to lose weight or to keep from gaining weight

Having **multiple races** to:
  - Strongly agree or agree that they feel good about themselves
Hispanic/Latino or as having multiple races to:
  • Disagree or strongly disagree that they feel alone in their life

Hispanic/Latino to:
  • Be physically active for a total of at least 60 minutes per day on seven of the past seven days

Black, Hispanic/Latino, students who identify as having an other race to:
  • Have seen a dentist for a check-up, exam, teeth cleaning, or other dental work during the past 12 months

Students that identify as having an other race were significantly more likely than students that identify as:

White to:
  • Smoke a whole cigarette for the first time before age 11 years
  • Smoke cigarettes on one or more of the past 30 days

Students that identify as having multiple races were significantly more likely than students that identify as:

White to:
  • Have ever carried a weapon, such as a gun, knife, or club
  • Have ever been in a physical fight
  • Have ever tried to kill themselves
  • Have ever gone without eating for 24 hours or more to lose weight or keep from gaining weight
  • Watch three or more hours per day of TV on an average school day
  • Report gang activity in their school
  • Have ever felt so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during the past 12 months

Black to:
  • Have ever been bullied on school property

Black or Hispanic/Latino to:
  • Have ever been electronically bullied
  • Have ever been the victim of teasing or name calling during the past 12 months because someone thought they were gay, lesbian, or bisexual.

Black, White, or as having an other race to:
  • Be trying to lose weight
Introduction

The 2011 Youth Risk Behavior Survey (YRBS) was produced by the Centers for Disease Control and Prevention (CDC) and modified by the North Carolina Department of Public Instruction (NCDPI) and their state collaborative partners. The NCYRBS is used to assess health risk behaviors that contribute to the leading causes of death and injury among children and adolescents. This survey is typically administered at the middle and high school level in the spring of odd-numbered years to coincide with the national high school administration of the YRBS conducted by CDC. The primary purpose of the survey is to measure progress towards achieving the National Healthy People and North Carolina Health Objectives for the year 2020.

Additionally, education and health officials use NCYRBS data to fund programs and create policies that reduce health-risk behaviors among youth, as behaviors in youth often transcend into adulthood. State and local agencies and nongovernmental organizations use NCYRBS data to set health education and health promotion goals, support curricula or program modification, inform legislation relating to health, and to seek funding for new initiatives.

The 2011 Middle School NCYRBS consisted of 77 items that addressed behaviors relating to personal safety, violence, tobacco, alcohol and other drug use, physical health, nutrition, physical activity, psychological health, health education experiences, and the perceived safety of the school environment. The items were mainly presented in a multiple-choice format and the entire survey could be completed in 45-50 minutes, or one class period. A copy of the questionnaire used for the 2011 Middle School NCYRBS is located in Appendix A.
Procedures

Sampling. In 2011, the Middle School NCYRBS was administered for the eighth time since 1995. The sample of students chosen to participate in the survey was drawn through a two-stage process. First, a probability sample of middle schools was drawn from all of the middle schools in the state, serving at least one grade six through eight. The CDC was responsible for drawing the sample. Then, individual classes (e.g., Mrs. Johnson’s 2nd period Algebra class) were randomly sampled from within those schools. All of the students in those selected classes then comprised the sample.

The NCYRBS sample is drawn in such a manner that, if the overall response rate is above 60%, the results of the survey can be generalized to the entire population of middle school students in the state with a relatively high level of precision. The overall response rate is a function of the percentage of sampled schools that participate as well as the percentage of students enrolled in the sampled classes that actually complete the survey. In 1995, 2001, 2007, and 2011 an overall response rate of 60% or higher was achieved for the Middle School NCYRBS, meaning that those results can be considered to be representative of the statewide population of middle school students in each of those years. In 1997, 2003, 2005, and 2009 however, the overall response rate for the sample was below 60%, meaning that the data from that year cannot be considered to be representative of the state’s entire middle school population, just those students surveyed (Tables 1-2).

† The NCYRBS was not conducted in 1999 because the participation rate for the sampled schools would have been too low to generate valid statewide estimates.

‡ In 1997, 2003, 2005, and 2009 the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students; results represent just those surveyed.
**Parental Permission.** Although the Pupil Protection Rights Amendment (PPRA) of 1994 primarily applies to required surveys funded by the federal Department of Education, it also applies to any student survey, regardless of funded origin, that asks sensitive questions. Since the NCYRBS does ask some sensitive questions to assess student risk, LEAs must notify a parent at least annually, at the beginning of the school year, of the specific or approximate date(s) of the survey and an opportunity to opt his or her child out of participating. LEAs must also notify parents that they have the right to review, upon request, any instructional materials used in connection with any survey that contains a sensitive question as defined by PPRA.

Schools can either offer active or passive parental permission for the NCYRBS. This can be done at the beginning of the school year and cover all student surveys or prior to the NCYRBS implementation. Active permission is when a parent completes a permission form for their child to participate. Passive permission is when a parent only completes permission to opt their student out. Data supports that response rates are higher when passive permission is used, as students often times forget to bring completed permission forms back to class. In a study on student alcohol consumption, data from students whose parents allowed them to participate through active consent revealed sample bias of underreported lifetime alcohol consumption (Frissell KC et al., 2004).

**Data Collection.** In the fall of 2010, 40 schools were selected to participate in the 2011 Middle School NCYRBS from among all of the public schools statewide that served grades six through eight. Of those, 37 participated. NCYRBS Coordinators were identified by their Superintendents to implement the survey. Information on standardized survey administration procedures as well as sets of materials for administering the survey were disseminated at regional training sessions held by NCDPI Healthy Schools. Coordinators then made arrangements with each school to conduct the survey during the Spring semester of 2011 on a date that was convenient for the school. The surveys were administered during a single class period to the students in the sampled classes who were present on the day of administration. Observations of survey administrators as well as analyses of missing data patterns confirmed that students were easily able to complete the survey during the allotted time. Students completed the survey instrument on a voluntary basis.

**Data Processing.** NCYRBS Coordinators returned all student response sheets and other related information to NCDPI, where they were cataloged and checked for anomalies before being sent to CDC for scanning and processing in the summer of 2011. CDC staff then generated statistical weights to be applied to the data that allowed for the generation of statewide estimates based on the responses of the sampled students. CDC then provided separate analyses for each NCYRBS survey item to NCDPI in the winter of 2011.

**Sample Characteristics.** In addition to providing responses to survey items focused on various health risk behaviors, students completing the NCYRBS also responded to questions about basic demographic information. Because of the sampling procedures employed for the NCYRBS, the sample of students participating each year has been relatively proportional to the overall statewide high school student population in terms of demographics.

---

2 Juvenile justice schools, hospital schools, and schools for students with severe disabilities were not included in the sampling frame.

Note: Percentages in this figure are unweighted. Prior to 2001, the number of students in the sample identifying themselves as Hispanic was too small to provide accurate subgroup estimates. The survey did not give students the option of identifying themselves as Multi-racial until 2001.

Interpretation of Results. The YRBS sampling design allows for estimates of health risk behaviors to be generated at an overall level as well as disaggregated by major demographic subgroups (e.g., gender, ethnicity, grade level). Overall and individual results are reported in this document under the following topical headings:

- Personal Safety
- Weight Management
- School Environment
- Violence
- Physical Health
- Disability
- Tobacco Use
- Nutrition
- Psychological Health
- Alcohol Use
- Physical Activity
- Prevention Related Indicators
- Other Drug Use
- Sexual Behavior

As mentioned previously, 1997, 2003, 2005, and 2009 were not based on a sufficient response rate (less than 60% combined school and student participation) to generalize those results to the state as a whole. Therefore, the interpretation of results focuses primarily on changes between 1995, 2001, 2007, and 2011 as well as differences between subgroups within those years.

Also, in many instances the differences highlighted in this document, in terms of trends over time or differences among subgroups of students, represent statistically significant differences when indicated as “significant.” Although many of the estimates in the figures may differ slightly from one another, the fact that they are based on a sample (rather than the responses of all high school students in the state) means that any discussion of differences between estimates must take into account some error due to sampling. Statistical significance tests have been applied to the estimates in this report that take this sampling error into account. The results of those tests provided information as to whether the observed differences likely reflected true differences in the student population from which the sample was drawn, rather than just peculiarities due to sampling.
**Personal Safety**

Deaths from unintentional injuries account for approximately two thirds of deaths from all injuries in the US.\(^1\) The 2011 YRBS covered unintentional injury topics including *bicycle helmet use*, *seat belt use*, *alcohol use by drivers*, and *distracted driving*.

Bicycle crashes represent an important area for unintentional injury prevention. Most deaths due to bicycle crashes are caused by head injury, and using bicycle helmets is the single most effective way of reducing head injuries and fatalities. According to data summarized by the CDC, bicycle helmets could prevent 56% of bicycle-related deaths, 65%-88% of bicycle-related brain injuries, and 65% of serious facial injuries to the upper and middle regions of the face.\(^2\)

Young drivers ages 15 to 20 years old are especially vulnerable to death and injury on roadways. Traffic crashes are the leading cause of death for teenagers in America. Mile for mile, teenagers are involved in three times as many fatal crashes as all other drivers.\(^3\) The risk of motor vehicle crashes is higher among 16 to 19 year olds than among any other age group.\(^4\) These statistics are even more concerning because teens also have lower rates of seat belt use compared with other age groups. Proper use of lap and shoulder belts reduces the risk of fatal injury to passengers in the front seat by 45% and the risk of moderate-to-critical injury by 50%. All drivers and front seat passengers ages 16 and older must wear their seat belts.\(^3\)

Alcohol use is associated with 24% of traffic fatalities among those less than 15 years old.\(^2\) Distracted driving is another risk behavior associated with motor vehicle crashes: in 2008, there were over 500,000 injuries and 5,800 fatalities in crashes in which at least one type of driver distraction was reported. Compared with other age groups, young people under age 20 most likely to engage in distracted driving.\(^3\)

*Non-Hispanic*
Percent of students who have ever ridden in a car or other vehicle driven by someone who had been recklessly speeding

*Non-Hispanic

In 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, students in the 8th grade were significantly more likely than students in the 6th grade to ride in a car or other vehicle driven by someone who had been recklessly speeding.
Violence-Related Behavior

Youth violence results in numerous preventable deaths and injuries each year, often related to physical fights and the use of weapons. In 2008, more than 656,000 young people ages 10 to 24 were treated in emergency departments for injuries resulting from violence.¹

Homicide is the 2nd leading cause of death for young people ages 10 to 24 in the United States.¹ ² In 2007, 5,764 young people ages 10 to 24 were murdered, representing an average of 16 youth homicides every day. More than eight out of ten homicide victims ages 10 to 24 are killed with a firearm.¹

According to the 2010 National Crime Victimization Survey, students ages 12 to 18 were about equally likely to experience serious violent crimes at school or away from school, with 4-5 serious violent victimizations per 1,000 students.³ In 2009, 11.1% of students in grades 9-12 reported being in a physical fight on school grounds in the prior 12 months; 5.6% reported carrying a weapon such as gun, knife, or club to school in the prior 30 days; and 7.7% reported being threatened or injured with a weapon on school grounds at least once in the prior 12 months.¹

The NCYRBS also includes a number of questions about interpersonal violence, covering topics such as experiences of physical violence from a boyfriend or girlfriend, forced sexual intercourse, and verbal abuse as a result of being perceived to be lesbian, gay, or bisexual. According to the CDC’s Dating Matters Initiative, such interpersonal violence can have immediate negative impact on teens’ mental and physical health and on their performance in school.⁴ In addition, such violence can have long-term effects for violence perpetration and/or victimization into adulthood.⁴

Percent of students who have ever been the victim of teasing or name calling during the past 12 months because someone thought they were gay, lesbian, or bisexual

- In 2011, students who identify as having multiple races were significantly more likely than students who identify as Black or Hispanic/Latino to have ever been the victim of teasing or name calling during the past 12 months because someone thought they were gay, lesbian, or bisexual.
Tobacco Use

Tobacco use, including cigarette smoking, cigar smoking, and smokeless tobacco use, is the single leading preventable cause of death in the United States. According to the CDC, smoking causes an estimated 435,000 premature deaths each year and over 5 million years of potential life lost.\textsuperscript{1} Cigarette smoking causes 87\% of lung cancer deaths. Lung cancer is the leading cause of cancer death in both men and women. Smoking is also responsible for most cancers of the larynx, oral cavity and pharynx, esophagus, and bladder.\textsuperscript{2}

8 in 10 adult smokers report that they began smoking before age 18. In addition, teen smokeless tobacco users are more likely than nonusers to become adult cigarette smokers.\textsuperscript{3-4} Every day, more than 3,800 youth under age 18 try their first cigarette, and about 1,000 youth under age 18 begin smoking on a daily basis.\textsuperscript{5}
The percent of students who smoked a whole cigarette for the first time before age 11 years has decreased significantly since 2007.

In 2011, students who identify as having an other race were significantly more likely than students who identify as White to have smoked a whole cigarette before the age 11 years.
Percent of students who smoked cigarettes on one or more of the past 30 days

Alcohol Use

Alcohol abuse, including binge drinking and underage drinking, is the third leading preventable cause of death in the United States. Among youth, the use of alcohol and other drugs has also been linked to unintentional injuries, physical fights, academic and occupational problems, and illegal behavior. Long-term alcohol misuse is associated with liver disease, cancer, cardiovascular disease, and neurological damage as well as mental health problems. Drug use contributes directly and indirectly to the HIV epidemic, and alcohol and other drug use contribute markedly to infant morbidity and mortality. It is illegal for a person less than 21 years old to purchase, to attempt to purchase, or to possess alcohol.

*Non-Hispanic

In 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.
**Other Drug Use**

The NCYRBS asks several questions about lifetime and current use of various drugs including marijuana, cocaine, hallucinogens, ecstasy, heroin, steroids, methamphetamines, and inhaled substances. Drug use among young people is related to suicide, early unwanted pregnancy, school failure, delinquency, and transmission of sexually transmitted infections (STI), including human immunodeficiency virus (HIV). Among youth, the use of alcohol and other drugs has also been linked to unintentional injuries, physical fights, academic and occupational problems, and illegal behavior.
In 1997, 2003, 2005 and 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

*Non-Hispanic

In 2005 and 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, 8th grade students were significantly more likely than 6th grade students to have ever taken a prescription drug such as OxyContin, Percocet, Demerol, Adoral, Ritalin, or Zanax without a doctor’s prescription.
The percent of students who ever took steroid pills or shots without a doctor’s prescription has **decreased** significantly since 2001.
Percent of students who were offered, sold, or given an illegal drug on school during the past 12 months

In 1997, 2003, 2005 and 2009, the Middle SchoolNCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, 8th grade students were significantly more likely than 6th grade students to have been offered, sold, or given an illegal drug on school property during the past 12 months.
**Weight Management**

Overweight and obesity have been increasing in both genders and among all population groups for several decades. Approximately 400,000 deaths each year in the U.S. are associated with overweight and obesity. If this trend continues, it is expected to replace tobacco as the leading cause of death.

For children and youth, we use a percentile rank of Body Mass Index (BMI) for age and sex to assess whether students are overweight or obese. In the NCYRBS, the BMI percentiles are based on students’ self-reported height and weight, their age, and their sex. Although self-reported data may result in underestimates of the prevalence of overweight, the data can be useful in tracking trends over time. Prevalence trends from national surveys of adults using self-reported height and weight data have been consistent with trend data from national surveys using measured height and weight.

In adolescence, obesity is associated with hyperlipidemia, hypertension, abnormal glucose tolerance, and adverse psychological and social consequences. Data has shown that high perception of body dissatisfaction and high rates of dieting among adolescent females—with many participating in unhealthy weight control behaviors such as self-induced vomiting and fasting—can lead to abnormal physical and psychological development.
Percent of students who described themselves as slightly or very overweight

*Non-Hispanic

*In 1997, 2003, 2005 and 2009, the Middle SchoolNCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.*

- In 2011, students who identify as Hispanic/Latino were significantly more likely than students who identify as White to report vomiting or taking laxatives to lose weight or to keep from gaining weight.
In 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, female students were significantly more likely than male students to report skipping meals to lose weight or to keep from gaining weight during the past 30 days.
Physical Health

Guidelines from the American Academy of Pediatrics and the American Academy of Family Physicians recommend that children ages one to six receive a well-child exam every year and children ages 7 to 17 receive a well-child exam every two years. However, many children and adolescents in the U.S. do not receive regular preventive-care visits. This makes it more difficult to diagnose and manage chronic conditions like asthma, and less likely that a young person would be tested for important infectious diseases such as HIV.

Asthma

Asthma is a leading chronic illness among children and youth in the United States. In 2009, 7.1 million school-aged children and youth were reported to currently have asthma. Four million young people under age 18 had asthma attacks and were considered to be at risk for adverse outcomes such as emergency department visits or hospitalization. The impact of illness and death due to asthma is disproportionately higher among racial and ethnic minorities and low-income populations than in the general population.

Nutrition

According to research compiled by the Centers for Disease Control (CDC), healthy eating is associated with reduced risk for many diseases, including several of the leading causes of death: heart disease, cancer, stroke, and diabetes. Healthy eating in childhood and adolescence is important for proper growth and development and can prevent health problems such as obesity, dental caries, iron deficiency, and osteoporosis. The Dietary Guidelines for Americans recommend a diet rich in fruits and vegetables, whole grains, and fat-free and low-fat dairy products for persons aged 2 years and older. The guidelines also recommend that children, adolescents, and adults limit intake of solid fats (major sources of saturated and trans fatty acids), cholesterol, sodium, added sugars, and refined grains. Unfortunately, most young people are not following the recommendations set forth in the Dietary Guidelines for Americans. Schools are in a unique position to promote healthy eating and help ensure appropriate food and nutrient intake among students. Schools provide students with opportunities to consume an array of foods and beverages throughout the school day and enable students to learn about and practice healthy eating behaviors.

*Non-Hispanic

*In 2009, the Middle School NCTRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.*
In 2009, the Middle School CYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, male students were significantly more likely than female students to eat breakfast on all of the past seven days.
- In 2011, 6th grade students were significantly more likely than 8th grade students to eat breakfast on all of the past seven days.
Physical Activity

Regular physical activity in childhood and adolescence improves strength and endurance, helps build healthy bones and muscles, helps control weight, reduces anxiety and stress, increases self-esteem, and may improve blood pressure and cholesterol levels. The U.S. Department of Health and Human Services recommends that young people aged 6–17 years participate in at least 60 minutes of physical activity daily.  

In 2009, only 18% of high school students had participated in at least 60 minutes per day of physical activity, and only 33% attended physical education class daily. Schools can promote physical activity through comprehensive school physical activity programs, including recess, classroom-based physical activity, intramural physical activity clubs, interscholastic sports, and physical education. Regular physical activity may also help improve students’ academic performance including academic achievement and grades, behaviors such as time on task and Schools should ensure that physical education is provided to all students in all grades and is taught by qualified teachers.
Percent of students who were physically active for a total of at least 60 minutes per day on five or more of the past seven days

*Non-Hispanic

In 2005 and 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, students who identify as White were significantly more likely than students who identify as Black or Hispanic/Latino to report being physically active for a total of at least 60 minutes per day on five or more of the past seven days.
Percent of students who were physically active for a total of at least 60 minutes per day on 0 of the past seven days

*Non-Hispanic

- In 2011, students who identify as Black were significantly more likely than students who identify as White to report being physically active for a total of at least 60 minutes per day on 0 of the past seven days.
Percent of students who were physically active for a total of at least 60 minutes per day on 7 of the past seven days

- In 2011, male students were significantly more likely than female students to report being physically active for a total of at least 60 minutes per day on 7 of the past seven days.
- In 2011, students who identify as White were significantly more likely than students who identify as Hispanic/Latino to report being physically active for a total of at least 60 minutes per day on 7 of the past seven days.
The percent of students who watched three or more hours per day of TV on an average school day has decreased significantly since 2007.

In 2011, students who identify as Black were significantly more likely than students who identify as White or as having an other race to report watching three or more hours per day of TV on an average school day.

In 2011, students who identify as Hispanic/Latino or as having multiple races were significantly more likely than students who identify as White to report watching three or more hours per day of TV on an average school day.
Percent of students who played video or computer games or used a computer for something that is not school work three or more hours per day on an average school day

*Non-Hispanic

In 2005 and 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- The percent of students who played video or computer games or used a computer for something that is not school work three or more hours per day on an average school day has increased significantly since 2007.
- In 2011, students that identify as Black were significantly more likely than students who identify as White to report that they played video or computer games or used a computer for something that is not school work three or more hours per day on an average school day.
Percent of students who usually walk or ride their bike to school on one or more days per week

*Non-Hispanic

In 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, students that identify as Black or Hispanic/Latino were significantly more likely than students who identify as White to walk or ride their bike to school one or more days per week.
**Health Education**

The North Carolina Healthful Living Standard Course of Study outlines objectives for health education regarding sexuality education. The state mandates that students be taught that abstinence until marriage is the expected standard for all school age youth; students are also required to learn about Human Immunodeficiency Virus (HIV) and other Sexually Transmitted Diseases (STD).

According to North Carolina Legislation G.S. 115C-81 (e1) guidelines, schools must:

- Present factually accurate biological or pathological information that is related to the human reproductive system;
- Focus on the benefits of abstinence until marriage and the risks of premarital sexual intercourse;
- Establish abstinence from sexual intercourse outside of marriage as the expected standard for all school-age children;
- Offer positive reinforcement for abstinence;
- Provide opportunities that allow for interaction between the parent or legal guardian and the student;
- Assure that students are aware of the difference between risk reduction through use of contraceptives and/or condoms and risk elimination through abstinence;
- For any instruction concerning contraceptives or prophylactics, provide accurate statistical information on their effectiveness and failure rates for preventing pregnancy and sexually-transmitted diseases, including HIV/AIDS, in actual use among adolescent populations;
- Inform students of the current legal status of those homosexual acts that are a significant means of transmitting diseases, including HIV/AIDS; and
- Assure that students understand that a mutually faithful, monogamous, heterosexual relationship in the context of marriage is the best lifelong means of avoiding diseases transmitted by sexual contact, including HIV/AIDS.
Percent of students who had ever been taught about abstaining from sexual activity

*Non-Hispanic

In 2005 and 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, students in the 7th and 8th grades were significantly more likely than students in the 6th grade to report that they have ever been taught about abstaining from sexual activity.
In 1997, 2003, 2005 and 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- The percent of students who have ever been taught in school about AIDS or HIV infection has **decreased significantly** since 1995.
- In 2011, students in the 7th and 8th grades were **significantly more** likely than students in the 6th grade to report that they have ever been taught in school about AIDS or HIV infection.
In 2011, students in the 7th and 8th grades were significantly more likely than students in the 6th grade to report that they have ever been taught about chlamydia, gonorrhea, syphilis, or human papillomavirus, or genital warts.
Psychological Health

Even though most American children and youth experience normal, healthy development, approximately 6 to 9 million have serious emotional disturbances.\(^1\) Research shows that one of five children and adolescents aged 9 to 17 experience symptoms of mental health problems that cause some level of impairment in a given year.\(^2\) However, fewer than 20 percent who need mental health service receive them.\(^3\)

Estimates of spending for behavioral health services for children and youth conservatively range from $11.7 Billion to $14.07 billion.\(^4,5\) Left untreated, mental health disorders in children and adolescents lead to higher rates of suicide, violence, school dropout, family dysfunction, juvenile incarcerations, alcohol and other drug use, and unintentional injuries. Schools can play a vital role in creating safe, nurturing school environments and providing care to students with emotional or behavioral problems.
Percent of students who felt so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during the last 12 months

In 2003, 2005 and 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, female students were significantly more likely than male students to feel so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during the past 12 months.
- In 2011, students who identify as having multiple races were significantly more likely than students who identify as White to feel so sad or hopeless almost every day for two weeks or more in a row that they stopped doing some usual activities during the past 12 months.
Percent of students who ever seriously thought about killing themselves

In 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- The percent of students who have ever seriously thought about killing themselves has decreased significantly since 2007.
- In 2011, female students were significantly more likely than male students to have ever seriously thought about killing themselves.
Percent of students who ever made a plan about how they would kill themselves

*Non-Hispanic

In 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.
In 2011, students who identify as Hispanic/Latino or having multiple races were significantly more likely than students who identify as White to ever try to kill themselves.
School Environment

In order to be ready and able to learn, students need to feel physically and emotionally safe at school. Concerns about vulnerability to attacks by others at school and on the way to and from school may have a damaging effect on the school environment and on student learning.¹

According to the National School Safety Center, bullying is defined as hurtful or aggressive act toward an individual or group that is intentional and repeated.¹ It often includes a real or perceived imbalance of physical power, a social network, or verbal skills that favor the perpetrator(s). The CDC reports that an estimated 30% of all US students in grades sixth through tenth were either a bully or a target of bullying.²
In 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, 8th grade students were **significantly more** likely than 6th grade students to report gang activity at their school.
- In 2011, students who identify as Black, Hispanic/Latino, or having multiple races were **significantly more** likely than students who identify as White to report gang activity at their school.

*Non-Hispanic

In 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.

- In 2011, 8th grade students were significantly more likely than 6th grade students to be alone without a parent or adult three or more hours per day on an average school day.
Percent of students who participate in school activities other than sports, such as band, drama, clubs, or student government

In 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.
Percent of students who played on one or more sports teams during the past 12 months

Disability

Limited information on the prevalence and correlates of disability in the population has resulted in the growth of inclusion of questions on disability in censuses and national surveys. Data on health-risk behaviors among children and youth with disabilities has been a particular concern given functional limitations and susceptibility of this population. Concepts and definitions of disability vary not only across disciplines, government agencies and service systems but also as a function of the age of the individual. This variability has contributed to a lack of consistent estimates of disability in the population. A 2001 publication of the International Classification of Functioning (ICF), Disability and Health by the World Health Organization (WHO) has provided a universal framework and taxonomy for documenting dimensions of disability as an alternative to diagnosed health conditions. As such, functional limitations in learning, mobility and performance of activities of daily life as defined by the ICF, have served as the base for operationalizing items in surveys. Data can provide estimates of the school population at risk for experiencing difficulties in meeting the academic and/or social demands of the school.

According to the CDC, since the Americans with Disabilities Act was enacted in 1990, many social barriers have been removed or reduced for people with disabilities. More work needs to be done for people with disabilities to become more independent and involved in their world. Good health is important to be able to work, learn, and be engaged within a community. People with disabilities need health care and health programs for the same reasons anyone else does—to stay well, active, and a part of the community.
Percent of students who consider themselves to have a disability

In 2003, 2005 and 2009, the Middle School NCYRBS did not achieve a high enough response rate to generalize results for all middle school students, just those surveyed.
Percent of students who have trouble learning, remembering, or concentrating because of disability or health problem

2011 NORTH CAROLINA
YOUTH RISK BEHAVIOR SURVEY

MIDDLE SCHOOL QUESTIONNAIRE

This survey is about health behavior. It has been developed so you can tell us what you do that may affect your health. The information you give will be used to improve health education for young people like yourself.

DO NOT write your name on this survey. The answers you give will be kept private. No one will know what you write. Answer the questions based on what you really do.

Completing the survey is voluntary. Whether or not you answer the questions will not affect your grade in this class. If you are not comfortable answering a question, just leave it blank.

The questions that ask about your background will be used only to describe the types of students completing this survey. The information will not be used to find out your name. No names will ever be reported.

Make sure to read every question. Fill in the circles completely. When you are finished, follow the instructions of the person giving you the survey.

Thank you very much for your help.
Directions
• Use a #2 pencil only.
• Make dark marks.
• Fill in a response like this: A B D.
• If you change your answer, erase your old answer completely.

1. How old are you?
   A. 10 years old or younger
   B. 11 years old
   C. 12 years old
   D. 13 years old
   E. 14 years old
   F. 15 years old
   G. 16 years old or older

2. What is your sex?
   A. Female
   B. Male

3. In what grade are you?
   A. 6th grade
   B. 7th grade
   C. 8th grade
   D. Ungraded or other grade

4. Are you Hispanic or Latino?
   A. Yes
   B. No

5. What is your race? (Select one or more responses.)
   A. American Indian or Alaska Native
   B. Asian
   C. Black or African American
   D. Native Hawaiian or Other Pacific Islander
   E. White

6. During the past 12 months, how would you describe your grades in school?
   A. Mostly A’s
   B. Mostly B’s
   C. Mostly C’s
   D. Mostly D’s
   E. Mostly F’s
   F. None of these grades
   G. Not sure

The next 12 questions ask about personal safety and violence-related behaviors.

7. When you ride a bicycle, how often do you wear a helmet?
   A. I do not ride a bicycle
   B. Never wear a helmet
   C. Rarely wear a helmet
   D. Sometimes wear a helmet
   E. Most of the time wear a helmet
   F. Always wear a helmet

8. When you rollerblade or ride a skateboard, how often do you wear a helmet?
   A. I do not rollerblade or ride a skateboard
   B. Never wear a helmet
   C. Rarely wear a helmet
   D. Sometimes wear a helmet
   E. Most of the time wear a helmet
   F. Always wear a helmet

9. How often do you wear a seat belt when riding in a car?
   A. Never
   B. Rarely
   C. Sometimes
   D. Most of the time
   E. Always
10. Have you ever ridden in a car or other vehicle driven by someone who had been recklessly speeding?
   A. Yes  
   B. No  
   C. Not sure  

11. Have you ever ridden in a car driven by someone who had been drinking alcohol?
   A. Yes  
   B. No  
   C. Not sure  

12. Have you ever carried a weapon, such as a gun, knife, or club?
    A. Yes  
    B. No  

13. During the past 12 months, did someone threaten or injure you with a weapon such as a gun, knife, or club on school property?
    A. Yes  
    B. No  

14. Have you ever been in a physical fight?
    A. Yes  
    B. No  

15. Have you ever been in a physical fight in which you were hurt and had to be treated by a doctor or nurse?
    A. Yes  
    B. No  

16. During the past 30 days, did you not go to school because you felt you would be unsafe at school or on your way to or from school?
    A. Yes  
    B. No  

17. During the past 12 months, has someone stolen or deliberately damaged your property, such as your clothing or books, on school property?
    A. Yes  
    B. No  

18. Is there gang activity in your school?
    A. Yes  
    B. No  
    C. Not sure  

The next 4 questions ask about bullying. Bullying is when 1 or more students tease, threaten, spread rumors about, hit, shove, or hurt another student over and over again. It is not bullying when 2 students of about the same strength or power argue or fight or tease each other in a friendly way.

19. Have you ever been bullied on school property?
    A. Yes  
    B. No  

20. Have you ever been electronically bullied? (Include being bullied through e-mail, chat rooms, instant messaging, Web sites, or texting.)
    A. Yes  
    B. No  

21. Have you seen other students being bullied in your school?
    A. Yes  
    B. No  
    C. Not sure  

22. Have you ever been the victim of teasing or name calling because someone thought you were gay, lesbian, or bisexual?
    A. Yes  
    B. No
The next 5 questions ask about attempted suicide. Sometimes people feel so depressed about the future that they may consider attempting suicide or killing themselves.

23. During the past 12 months, did you ever feel so sad or hopeless almost every day for **two weeks or more** in a row that you stopped doing some usual activities?
   A. Yes
   B. No

24. When you feel sad, empty, hopeless angry, or anxious, with whom do you **usually** talk?
   A. I do not feel sad, empty, hopeless, angry, or anxious
   B. Parent or other adult family member
   C. Teacher or other adult in this school
   D. Religious leader
   E. Doctor or nurse
   F. Other adult
   G. Friend or sibling
   H. Some other person

25. Have you ever **seriously** thought about killing yourself?
   A. Yes
   B. No

26. Have you ever made a **plan** about how you would kill yourself?
   A. Yes
   B. No

27. Have you ever **tried** to kill yourself?
   A. Yes
   B. No

The next 4 questions ask about tobacco use.

28. How old were you when you smoked a whole cigarette for the first time?
   A. I have never smoked a whole cigarette
   B. 8 years old or younger
   C. 9 years old
   D. 10 years old
   E. 11 years old
   F. 12 years old
   G. 13 years old or older

29. During the past 30 days, on how many days did you smoke cigarettes?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days

30. During the past 12 months, did you ever try to **quit** smoking cigarettes?
   A. I did not smoke cigarettes during the past 12 months
   B. Yes
   C. No

31. During the past 30 days, on how many days did you use chewing tobacco, snuff, or dip, such as Redman, Levi Garrett, Beechut, Skoal, Skoal Bandits, or Copenhagen?
   A. 0 days
   B. 1 or 2 days
   C. 3 to 5 days
   D. 6 to 9 days
   E. 10 to 19 days
   F. 20 to 29 days
   G. All 30 days
The next 3 questions ask about drinking alcohol. This includes drinking beer, wine, wine coolers, and liquor such as rum, gin, vodka, or whiskey. For these questions drinking alcohol does not include drinking a few sips of wine for religious purposes.

32. Have you ever had a drink of alcohol, other than a few sips?
   A. Yes
   B. No

33. How old were you when you had your first drink of alcohol other than a few sips?
   A. I have never had a drink of alcohol other than a few sips
   B. 8 years old or younger
   C. 9 years old
   D. 10 years old
   E. 11 years old
   F. 12 years old
   G. 13 years old or older

34. During the past 30 days, how did you usually get the alcohol you drank?
   A. I did not drink alcohol during the past 30 days
   B. I bought it in a store such as a liquor store, convenience store, supermarket, discount store, or gas station
   C. I bought it at a restaurant, bar, or club
   D. I bought it at a public event such as a concert or sporting event
   E. I gave someone else money to buy it for me
   F. Someone gave it to me
   G. I took it from a store or family member
   H. I got it some other way

The next 4 questions ask about marijuana use. Marijuana also is called grass or pot.

35. Have you ever used marijuana?
   A. Yes
   B. No

36. How old were you when you tried marijuana for the first time?
   A. I have never tried marijuana
   B. 8 years old or younger
   C. 9 years old
   D. 10 years old
   E. 11 years old
   F. 12 years old
   G. 13 years old or older

37. During the past 30 days, did you use marijuana?
   A. Yes
   B. No

38. During the past 30 days, did you use marijuana on school property?
   A. Yes
   B. No

The next 5 questions ask about other drug use.

39. Have you ever used any form of cocaine, including powder, crack, or freebase?
   A. Yes
   B. No

40. Have you ever sniffed glue, breathed the contents of spray cans, or inhaled any paints or sprays to get high?
   A. Yes
   B. No
41. Have you ever taken **steroid pills or shots** without a doctor’s prescription?
   A. Yes
   B. No

42. Have you ever taken a **prescription drug** (such as OxyContin, Percocet, Vicodin, codeine, Adderall, Ritalin, or Xanax) without a doctor’s prescription?
   A. Yes
   B. No

43. During the past 12 months, has anyone offered, sold, or given you an illegal drug on school property?
   A. Yes
   B. No

The next 5 questions ask about abstinence, AIDS, and STD education.

44. Have you ever been taught about abstaining from sexual activity?
   A. Yes
   B. No
   C. Not sure

45. Have you ever been taught about AIDS or HIV infection in school?
   A. Yes
   B. No
   C. Not sure

46. Have you ever been taught about chlamydia, gonorrhea, syphilis, human papillomavirus, or genital warts?
   A. Yes
   B. No
   C. Not sure

47. When you have questions about sexually transmitted diseases (STD), HIV, AIDS, or pregnancy prevention, with whom do you usually talk?
   A. I do not have questions about sexually transmitted diseases (STD), HIV, AIDS, or pregnancy prevention
   B. Parent or other adult family member
   C. Teacher or other adult in this school
   D. Religious leader
   E. Doctor or nurse
   F. Other adult
   G. Friend or sibling
   H. Some other person

48. Have your parents or other adults in your family ever talked with you about what they expect you to do or not to do when it comes to sex?
   A. Yes
   B. No
   C. Not sure

The next 8 questions ask about body weight.

49. How do you describe your weight?
   A. Very underweight
   B. Slightly underweight
   C. About the right weight
   D. Slightly overweight
   E. Very overweight

50. Which of the following are you trying to do about your weight?
   A. Lose weight
   B. Gain weight
   C. Stay the same weight
   D. I am not trying to do anything about my weight
51. Have you ever **exercised** to lose weight or to keep from gaining weight?
   A. Yes
   B. No

52. Have you ever **eaten less food, fewer calories, or foods low in fat** to lose weight or to keep from gaining weight?
   A. Yes
   B. No

53. Have you ever **gone without eating for 24 hours or more** (also called fasting) to lose weight or to keep from gaining weight?
   A. Yes
   B. No

54. Have you ever **taken any diet pills, powders, or liquids** without a doctor’s advice to lose weight or to keep from gaining weight? (Do not include meal replacement products such as Slim Fast.)
   A. Yes
   B. No

55. Have you ever **vomited or taken laxatives** to lose weight or to keep from gaining weight?
   A. Yes
   B. No

56. During the past 30 days, did you **skip meals** to lose weight or to keep from gaining weight?
   A. Yes
   B. No

**The next 2 questions ask about food you ate or drank during the past 7 days.**

57. During the past 7 days, on how many days did you eat **breakfast**?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days

58. During the past 7 days, on how many days did you eat dinner at home with your family?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days

**The next 5 questions ask about physical activity.**

59. During the past 7 days, on how many days were you physically active for a total of **at least 60 minutes per day**? (Add up all the time you spent in any kind of physical activity that increased your heart rate and made you breathe hard some of the time.)
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days
   G. 6 days
   H. 7 days
60. During the past 12 months, on how many sports teams did you play? (Count any teams run by your school or community groups.)
   A. 0 teams
   B. 1 team
   C. 2 teams
   D. 3 or more teams

61. On an average school day, how many hours do you watch TV?
   A. I do not watch TV on an average school day
   B. Less than 1 hour per day
   C. 1 hour per day
   D. 2 hours per day
   E. 3 hours per day
   F. 4 hours per day
   G. 5 or more hours per day

62. On an average school day, how many hours do you play video or computer games or use a computer for something that is not school work? (Include activities such as Xbox, PlayStation, Nintendo DS, iPod touch, Facebook, and the Internet.)
   A. I do not play video or computer games or use a computer for something that is not school work
   B. Less than 1 hour per day
   C. 1 hour per day
   D. 2 hours per day
   E. 3 hours per day
   F. 4 hours per day
   G. 5 or more hours per day

63. How many days per week do you usually walk or ride your bike to school?
   A. 0 days
   B. 1 day
   C. 2 days
   D. 3 days
   E. 4 days
   F. 5 days

The next 8 questions ask about other health-related topics.

64. Has a doctor or nurse ever told you that you have asthma?
   A. Yes
   B. No
   C. Not sure

65. Do you still have asthma?
   A. I have never had asthma
   B. Yes
   C. No
   D. Not sure

66. An asthma action/management plan contains instructions about how to care for your asthma. Do you have a written asthma action plan or asthma management plan on file at school?
   A. I do not have asthma
   B. No
   C. Yes
   D. Don't Know

67. On an average school night, how many hours of sleep do you get?
   A. 4 or less hours
   B. 5 hours
   C. 6 hours
