## Acknowledgements

The North Carolina Department of Public Instruction (NCDPI) would like to extend a warm thank you to all the principals and health education teachers that participated in the 2004 North Carolina School Health Education Profile Surveys. The time and dedication it took to complete the survey in such a timely manner is greatly appreciated. Without your responses, statewide monitoring of school health curricula, professional development needs and health policies would not be possible.

The 2004 North Carolina School Health Education Profile Surveys were conducted by the NCDPI, Healthy Schools Initiative in collaboration with the North Carolina Department of Health and Human Services (NCDHHS). Numerous staff members from both agencies contributed to the survey design and the ongoing success of the initiative.

Donna Breitenstein, Director of the North Carolina Comprehensive School Health Training Center at Appalachian State University, Melanie Greene, Associate Professor of Education at Appalachian State University, Sherry Lehman, HIV/AIDS Policies and Programs Consultant at NCDPI, Sarah Langer, Evaluation and Abstinence Consultant at NCDPI, and Michael Sanderson, Senior Advisor for Healthy Schools at NCDHHS oversaw the survey development and sampling process and coordinated all data collection and verification. Melanie Greene was the primary for interpreting survey results, creating charts and authoring the report. Sherry Lehman and Sarah Langer assisted with this process.

## Introduction

During the spring of 2004 the North Carolina School Health Training Center, Department of Curriculum and Instruction at Appalachian State University, under a contract from the North Carolina Department of Public Instruction, surveyed principals and lead health education teachers in randomly selected schools containing grades 6 through 12 regarding the nature of health and physical education programs in their school. Two survey instruments were mailed to each principal and teacher in each selected school. The School Health Education Profile Survey - Part I was developed by the Centers for Disease Control and Prevention (CDC), Division of Adolescent and School Health, in collaboration with representatives of 75 state, local, and territorial departments of education. This instrument was specifically designed to monitor the status of school health and physical education, including education to prevent HIV infection, tobacco use, STDs, and other important health issues at the middle and high school levels. A work group consisting of members of the North Carolina Department of Public Instruction and the North Carolina Department of Health and Human Services, the director of the North Carolina School Health Training Center, and a faculty member from the Department of Curriculum and Instruction at Appalachian State University developed Part II - a North Carolina supplemental instrument for both principals and teachers. These questionnaires provided a more in-depth examination of several areas addressed on the School Health Education Profile Surveys-Part I.

## Sampling and Survey Procedures

All regular secondary public schools having at least one of the grades 6 through 12 were included in the sampling frame. Systematic equal probability sampling with a random start was used to select schools for this survey. Schools were sorted by estimated enrollment in the target grades with school grade level (middle schools, other) before sampling. This procedure resulted in the selection of 402 schools. The initial packet, mailed directly to the principals, contained two surveys (one for the principal and one for the lead health education teacher), stamped return envelopes for each participant, and an addressed, stamped post card to return, indicating the lead health educator in the school. Additionally, a letter explaining the survey procedure was included in the packet.

Implementation of the School Health Education Profile Surveys occurred between January and May of 2004. To initiate this research project, the Superintendent of the North Carolina Department of Public Instruction prepared a letter to inform local superintendents of all school districts with selected schools. This letter was mailed in January of 2004. The initial mailing of the survey instruments occurred in February of 2004. Follow-up reminder postcards were sent to non-respondents two weeks later. A second mailing of the survey instruments occurred early in March. Telephone reminders were conducted between April and May of 2004. When 70\% of surveys had been received, the data collection ended.

A total of 284 principal questionnaires were returned yielding a $70.32 \%$ response rate. A total of 281 surveys were completed and eligible for analysis. Data was analyzed from 158 middle schools, 111 high schools, and 12 junior/senior combined schools. Of the 402 sampled teachers, 280 ( $70.18 \%$ ) surveys were returned representing 108 high schools, 162 middle schools, and 10 junior/senior combined schools. In $2002,72 \%$ of sampled principals and $58 \%$ of sampled teachers returned surveys. Data from the Centers for Disease Control's School Health Education Profile Instrument (Part I) was processed by WESTAT according to the CDC contract protocol. Data from the locally generated supplemental instruments (Part II) was processed by the senior researcher in the Office of Institutional Research, Assessment, and Planning at Appalachian State University and then combined with the data from Part I. Reporting of data occurs in valid percents. When frequency counts were too small, results from the junior/senior combined schools were not reported. The findings provide an important description of school health education for schools North Carolina.

## Health Education

Health education taught as a required curriculum provides students with knowledge, attitudes, skills, and behaviors, and gives them the confidence needed to adopt and maintain a healthy lifestyle and make healthy choices. Health education can include, but is not limited to, the prevention of injury and violence, alcohol and other drug use, tobacco use, HIV/STD and teen pregnancy, the promotion of proper nutrition, and physical activity.

Question 1. Is a health education course required for students in any of grades 6 through 12 in this school?

Table 1. Health education course required in grades 6 through 12.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 106 | 95 | 89 |
| Middle School | 159 | 131 | 83 |
| Junior/Senior Combined |  |  |  |
| Total | 275 | 236 | 86 |

Health education is required for $83 \%$ of middle schools and $89 \%$ of high schools surveyed.

Question 2. Are teachers in this school required to use each of the following materials in a required health education course for students in any grades 6 through 12?

Table 2. Teachers required to use National Health Education Standards.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 87 | 39 | 46 |
| Middle School | 128 | 56 | 44 |
| Junior/Senior Combined | 10 | 3 | 27 |
| Total | 225 | 98 | 44 |

Table 3. Teachers required to use the state's curriculum, set of guidelines, or framework.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 94 | 93 | 99 |
| Middle School | 130 | 126 | 97 |
| Junior/Senior Combined | 10 | 8 | 81 |
| Total | 234 | 227 | 97 |

Table 4. Teachers required to use the district's curriculum set of guidelines, or framework.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 91 | 80 | 88 |
| Middle School | 129 | 109 | 84 |
| Junior/Senior Combined | 10 | 8 | 81 |
| Total | 230 | 197 | 86 |

Table 5. Teachers required to use the school's curriculum, set of guidelines, or framework.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 88 | 72 | 81 |
| Middle School | 128 | 91 | 71 |
| Junior/Senior Combined | 10 | 8 | 81 |
| Total | 226 | 171 | 75 |

Table 6. Teachers required to use any materials from health organizations, such as the American Red Cross or the American Cancer Society.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 89 | 43 | 49 |
| Middle School | 128 | 63 | 47 |
| Junior/Senior Combined | 10 | 6 | 63 |
| Total | 227 | 112 | 48 |

Table 7. Teachers required to use a commercially developed student textbook.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 90 | 72 | 80 |
| Middle School | 129 | 78 | 60 |
| Junior/Senior Combined | 10 | 9 | 91 |
| Total | 229 | 159 | 69 |

Table 8. Teachers required to use a commercially developed teacher's guide.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 90 | 64 | 71 |
| Middle School | 128 | 77 | 60 |
| Junior/Senior Combined | 10 | 9 | 91 |
| Total | 228 | 150 | 65 |

Teachers are required to use the state's curriculum in $97 \%$ of all middle schools and $99 \%$ of all high schools. Overall, $86 \%$ of teachers use the district's guidelines and $75 \%$ use the school's curriculum or guidelines. Approximately half of all teachers surveyed refer to the National Health Education Standards and over half of all teachers use a commercially developed textbook during instruction.

Question 3. During this school year, have teachers tried to increase student knowledge on each of the following topics in required health education course in any of grades 6 through 12?

Table 9. Increase of student knowledge of accident or injury prevention.

|  | Number | Response | Percent |

| Total | 233 | 213 | 91 |

Overall, 100\% of teachers report having tried to increase student knowledge on alcohol or other drug prevention, physical activity and fitness, and tobacco use prevention. Other key curricular areas include accident or injury prevention, emotional and mental health, HIV prevention, nutrition and dietary behavior, bullying and STD prevention. Less emphasis has been given to CPR, death and dying, dental and oral health, and knowledge of immunizations and vaccinations.

Question 4. During this school year, have teachers in this school tried to improve each of the following student skills in a required health education course in any of grades 6 through 12?

Table 31. Accessing valid health information, products, and services.

Table 60. Students have been asked to complete homework assignments with family members.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 93 | 66 | 70 |
| Middle School | 129 | 95 | 73 |
| Junior/Senior Combined |  |  |  |
| Total | 231 | 167 | 72 |

As part of a required health education course, middle school teachers have asked students to participate in identifying and analyzing advertisements designed to influence health behaviors or risks by completing homework with family members (73\%), identifying potential injury sites at school, home, or in the community ( $75 \%$ ), and analyzing advertising in the community. High school teachers have assigned homework to be done with family members ( $70 \%$ ), asked students to identify and analyze advertising in the community ( $73 \%$ ), and gather information about health services that are available in the community (66\%).

Question 8. For the following grades at this middle school, how many semesters or weeks per year are students required to take health education?

Table 61. Sixth grade requirement for health education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Health Education Not Taught | 7 | 4.3 |
| Less Than 9 Weeks | 49 | 30.1 |
| 9 Weeks | 48 | 29.4 |
| 1 Semester | 39 | 23.9 |
| 2 Semesters | 20 | 12.3 |
| Total | 163 | 100.0 |

Table 62. Seventh grade requirement for health education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Health Education Not Taught | 5 | 2.9 |
| Less Than 9 Weeks | 53 | 31.0 |
| 9 Weeks | 47 | 27.5 |
| 1 Semester | 46 | 26.9 |
| 2 Semesters | 20 | 11.2 |
| Total | 171 | 100.0 |

Table 63. Eighth grade requirement for health education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Health Education Not Taught | 6 | 3.5 |
| Less Than 9 Weeks | 53 | 31.2 |
| 9 Weeks | 42 | 24.7 |
| 1 Semester | 48 | 28.2 |
| 2 Semesters | 21 | 12.4 |
| Total | 170 | 100.0 |

Overall, lead health education teachers report that in grades six through eight, health education is taught nine weeks or less the majority of the time in their school (30.1) at the sixth and seventh grade levels (31.0) and at the eighth grade level (31.2). Only 12\% of teachers report that health is taught for two semesters.

Question 9. During those semesters/weeks, how many days per week are students required to take health education?

Table 64. Sixth grade requirement for days per week of health education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Health Education Not Taught | 6 | 3.8 |
| 0 Days Per Week | 6 | 3.8 |
| 1 Day Per Week | 19 | 11.9 |
| 2 Days Per Week | 29 | 18.1 |
| 3 Days Per Week | 18 | 11.3 |
| 4 Days Per Week | 4 | 2.5 |
| 5 Days Per Week | 78 | 48.8 |
| Total | 160 | 100.0 |

Table 65. Seventh grade requirement for days per week of health education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Health Education Not Taught | 5 | 3.0 |
| 0 Days Per Week | 6 | 3.6 |
| 1 Day Per Week | 20 | 11.8 |
| 2 Days Per Week | 34 | 20.1 |
| 3 Days Per Week | 19 | 11.2 |
| 4 Days Per Week | 4 | 2.4 |
| 5 Days Per Week | 81 | 47.9 |
| Total | 169 | 100.0 |

Table 66. Eighth grade requirement for days per week of health education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Health Education Not Taught | 5 | 3.0 |
| 0 Days Per Week | 7 | 4.2 |
| 1 Day Per Week | 19 | 11.3 |
| 2 Days Per Week | 34 | 20.2 |
| 3 Days Per Week | 21 | 12.5 |
| 4 Days Per Week | 4 | 2.4 |
| 5 Days Per Week | 78 | 46.4 |
| Total | 281 | 100.0 |

Overall, approximately 47\% of lead health education teachers report that in grades six through eight, health education is taught five days per week during the weeks that it is taught at their school. Teachers report that it is taught only two days per week $18.1 \%$ at the sixth grade level, $20.1 \%$ at the seventh grade level, and $20.2 \%$ at the eighth grade level.

## Question 10. At this high school, how many total credits of health education are required to graduate?

Table 67. Total credits required for graduation.

| Response | Response | Percent |
| :---: | :---: | :---: |
| 0 Credits (0 hours) | 3 | 2.4 |
| 1/4 Credit (37 hours) | 11 | 8.8 |
| 1/2 Credit ( 75 hours) | 76 | 60.8 |
| 1 Credit (150 hours) | 34 | 27.2 |
| More than 1 Credit (more that 150 hours) | 1 | . 8 |
| Total | 125 | 100.0 |

Of the lead health education teachers, 60.8\% report that only 75 hours or $1 / 2$ unit of health education is required for graduation. Twenty-seven percent reported that a full credit, more than 150 hours, is required for graduation.

## Question 11. Which of the following is the largest barrier to

 health education staff development for you?Table 68. Barriers to health education staff development.

|  | Response | Percent |
| :--- | ---: | ---: |
| School Funding | 79 | 37.6 |
| Substitute Availability | 2 | 1.0 |
| Location or Availability of Health <br> Specific Trainings | 63 | 30.0 |
| Other Barriers |  |  |
| No Barriers to Staff Development | 21 | 10.0 |
| Total | 210 | 21.4 |

School funding (37.6\%) and the location or availability of health specific training (30.0\%) are cited by lead health education teachers as the two largest barriers to health education staff development. Approximately $20 \%$ of the lead health teachers reported no barriers to staff development.

Question 12. In your Healthful Living Curriculum, do you spend equal time teaching physical education and health education?

Table 69. Percentage of time spent teaching physical education and health education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 119 | 56.1 |
| No. More time is Devoted to <br> Physical Education | 84 | 39.6 |
| No. More Time is Devoted to Health <br> Education | 9 | 4.2 |
| Total | 212 | 100.0 |

Of the lead health education teachers, 56 \% reported that equal time was devoted to teaching physical education and health education, whereas, only $4 \%$ reported that more time was devoted to health education.

## HIVISTDs And Teen Pregnancy Prevention

Being sexually active can place young people at risk for HIV infection, other sexually transmitted diseases (STDs), and unintended pregnancy. Responsible sexual behavior among adolescents is one of the leading health indicators of the national objectives for 2010 (CDC 2002). In an effort to educate youth on this topic, the North Carolina Healthful Living Standard Course of Study requires the instruction of abstinence until marriage and HIV/STD prevention education. The following tables present data about HIV, STD, and teen pregnancy prevention in North Carolina schools.

Question 13. During this school year, did teachers in this school teach each of the following HIV prevention topics in a required health education course for students in any of grades 6 through 12?

Table 70. Teachers teach abstinence as the most effective method to avoid HIV infection.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 90 | 89 | 99 |
| Middle School | 124 | 109 | 88 |
| Junior/Senior Combined | 10 | 9 | 90 |
| Total | 224 | 207 | 92 |

Table 71. Teachers teach how HIV is transmitted.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 93 | 89 | 96 |
| Middle School | 122 | 109 | 89 |
| Junior/Senior Combined | 10 | 8 | 81 |
| Total | 225 | 206 | 92 |

Table 72. Teachers teach how HIV affects the human body.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 93 | 86 | 93 |
| Middle School | 121 | 107 | 88 |
| Junior/Senior Combined | 10 | 8 | 81 |
| Total | 224 | 201 | 90 |

Table 73. Teachers teach how to correctly use a condom.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 93 | 20 | 22 |
| Middle School | 124 | 19 | 15 |
| Junior/Senior Combined |  |  |  |
| Total | 226 | 39 | 17 |

Table 74. Teachers teach condom efficacy, that is, how well condoms work and do not work.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 93 | 55 | 60 |
| Middle School | 125 | 74 | 59 |
| Junior/Senior Combined |  |  |  |
| Total | 227 | 131 | 58 |

Table 75. Teachers teach the influence of alcohol and other drugs on HIV-related risk behaviors.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 90 | 87 | 96 |
| Middle School | 123 | 103 | 83 |
| Junior/Senior Combined | 10 | 8 | 81 |
| Total | 223 | 198 | 88 |

Table 76. Teachers teach social or cultural influences on HIV-related risk behaviors.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 92 | 80 | 87 |
| Middle School | 124 | 99 | 79 |
| Junior/Senior Combined | 10 | 8 | 81 |
| Total | 226 | 187 | 82 |

Table 77. Teachers teach the number of young people who get HIV.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 93 | 84 | 91 |
| Middle School | 125 | 98 | 78 |
| Junior/Senior Combined | 10 | 8 | 81 |
| Total | 228 | 190 | 83 |

Table 78. Teachers teach how to find valid information or services related to HIV or HIV testing.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 93 | 79 | 86 |
| Middle School | 123 | 77 | 63 |
| Junior/Senior Combined | 10 | 7 | 72 |
| Total | 226 | 163 | 73 |

Table 79. Teachers teach compassion for persons living with HIV/AIDS.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 92 | 71 | 78 |
| Middle School | 124 | 93 | 74 |
| Junior/Senior Combined | 10 | 6 | 60 |
| Total | 226 | 170 | 75 |

The following HIV prevention topics were more often included by teachers in a required health education course at the high school level; abstinence (99\%), how HIV is transmitted (96\%), the influence of alcohol and other drugs on HI - related risk behaviors ( $96 \%$ ), and the number of young people who get HIV (91\%). At the middle school level, the following topics were included more often; how HIV is transmitted (89\%), abstinence as the most effective method to avoid getting HIV (88\%), and how HIV affects the body (88\%).

## Question 14. Are required HIV prevention units or lessons taught in each of the following courses in this school?

Table 80. HIV prevention is taught in science.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 91 | 29 | 32 |
| Middle School | 144 | 37 | 26 |
| Junior/Senior Combined |  |  |  |
| Total | 244 | 67 | 28 |

Table 81. HIV prevention is taught in home economics or family and consumer education.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 92 | 40 | 43 |
| Middle School | 142 | 11 | 7 |
| Junior/Senior Combined |  |  |  |
| Total | 242 | 53 | 21 |

Table 82. HIV prevention is taught in physical education.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 104 | 70 | 74 |
| Middle School | 153 | 80 | 53 |
| Junior/Senior Combined |  |  |  |
| Total | 267 | 165 | 62 |

Table 83. HIV prevention is taught in family life education or life skills.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 91 | 57 | 63 |
| Middle School | 150 | 47 | 31 |
| Junior/Senior Combined |  |  |  |
| Total | 249 | 107 | 43 |

Table 84. HIV prevention is taught in special education.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 90 | 22 | 24 |
| Middle School | 144 | 19 | 12 |
| Junior/Senior Combined |  |  |  |
| Total | 242 | 42 | 17 |

Table 85. HIV prevention is taught in social studies.

| High School | Number | Response | Percent |
| ---: | ---: | ---: | ---: |
| Middle School | 143 | 8 | 9 |
| Junior/Senior Combined |  | 6 | 4 |
| Total | 240 |  |  |

HIV prevention is taught as a required unit or lesson in several areas of the school curriculum. Most frequently, it is taught at the high school level in physical education (74\%), family life education (63\%), or home economics (43\%). At the middle school level, HIV prevention units or lessons are taught in physical education (53\%), or in science (26\%).

Question 15. Which of the following staff members is the primary person who teaches HIV/STD and teen pregnancy prevention in your school?

Table 86. Staff member responsible for teaching HIV/STD and teen pregnancy prevention.

|  | Response | Percent |
| :--- | ---: | ---: |
| Health Teacher | 137 | 50.2 |
| Physical Education Teacher | 68 | 24.9 |
| Science Teacher | 13 | 4.8 |
| School Nurse | 21 | 7.7 |
| Family and Consumer Science | 5 | 1.8 |
| Other | 29 | 10.6 |
| Total | 273 | 100.0 |

The professional who serves as the primary person to teach HIV/STD is most frequently the health education teacher ( $50.2 \%$ ), or the physical education teacher (24.9\%).

Question 16. How do your school's curricula for teaching HIV/STD and teen pregnancy prevention compare to the Healthful Living Standard Course of Study?

Table 87. Comparing the school's curricula for teaching HIV/STD and teen pregnancy prevention with the Healthful Living Standard Course of Study at the seventh grade level.

|  | Response | Percent |
| :--- | ---: | ---: |
| More restrictive | 44 | 23.2 |
| About the same | 34 | 70.5 |
| Less restrictive | 12 | 6.3 |
| Total | 190 | 100.0 |

Table 88. Comparing the school's curricula for teaching HIV/STD and teen pregnancy prevention with the Healthful Living Standard Course of Study at the eighth grade level.

|  | Response | Percent |
| :--- | ---: | ---: |
| More restrictive | 42 | 22.3 |
| About the same | 135 | 71.8 |
| Less restrictive | 11 | 5.9 |
| Total | 188 | 100.0 |

Table 89. Comparing the school's curricula for teaching HIV/STD and teen pregnancy prevention with the Healthful Living Standard Course of Study at the ninth grade level.

|  | Response | Percent |
| :--- | ---: | ---: |
| More restrictive | 38 | 24.1 |
| About the same | 104 | 65.8 |
| Less restrictive | 16 | 10.1 |
| Total | 158 | 100.0 |

Approximately 70\% of lead health education teachers report that their school's curricula for teaching HIV/STD and teen pregnancy prevention and the Healthful Living Standard Course of Study are about the same. Between $22 \%$ and $24 \%$ report that their program is more restrictive and $10 \%$ or less report that it is less restrictive.

Question 17. Typically, how much teaching time is devoted to teaching HIV/STD and teen pregnancy prevention during the course of the semester?

Table 90. Time devoted to HIV/STD and teen pregnancy prevention in a semester.

|  | Response | Percent |
| :--- | ---: | ---: |
| None | 13 | 4.7 |
| One class period | 19 | 6.9 |
| Several class periods | 86 | 47.1 |
| One week per semester | 31.4 |  |
| One hour per week for one quarter <br> (9hrs) | 20 | 7.3 |
| One hour per week for half of the <br> school year (18 hours) | 6 | 2.2 |
| One hour per week for the entire <br> school year (36 hours) | 1 | .4 |
| Total | 274 | 100.0 |

The equivalent of several class periods was reported by lead health education teachers (47.1) to be the time devoted to HIV/STD and teen pregnancy in a semester. Second to this amount was one week per semester (31.4\%). Less than 1\% of teachers report spending one hour per week for the entire year on this topic.

Question 18. The last time you taught the HIV/STD and teen pregnancy prevention unit in your class, were the following topics included?

Table 91. Abstinence until marriage was included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 257 | 95.5 |
| No | 12 | 4.5 |
| Total | 269 | 100.0 |

Table 92. Transmission and prevention of HIV/AIDS were included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 250 | 93.6 |
| No | 17 | 6.4 |
| Total | 267 | 100.0 |

Table 93. Transmission and prevention of STDs were included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 247 | 92.9 |
| No | 19 | 7.1 |
| Total | 266 | 100.0 |

Table 94. How to deal with issues/consequences of being sexually active was included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 204 | 77.0 |
| No | 61 | 23.0 |
| Total | 265 | 100.0 |

Table 95. How to deal with pressures to have sex was included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 236 | 88.4 |
| No | 31 | 11.6 |
| Total | 267 | 100.0 |

Table 96. How to talk with parents about sex and relationships was included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 147 | 55.5 |
| No | 118 | 44.5 |
| Total | 265 | 100.0 |

Table 97. Verbal/written instructions for condom use were included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 38 | 14.3 |
| No | 228 | 85.7 |
| Total | 266 | 100.0 |

Table 98. Classroom demonstrations for condom use were included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 17 | 6.4 |
| No | 248 | 93.6 |
| Total | 265 | 100.0 |

Table 99. Birth control was included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 113 | 42.5 |
| No | 153 | 57.5 |
| Total | 266 | 100.0 |

Table 100. How to use birth control was included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 57 | 21.4 |
| No | 209 | 78.6 |
| Total | 266 | 100.0 |

Table 101. Where to get birth control was included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 72 | 27.1 |
| No | 194 | 72.9 |
| Total | 266 | 100.0 |

Table 102. How to get tested for STDs and HIV was included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 170 | 64.2 |
| No | 95 | 35.8 |
| Total | 265 | 100.0 |

Table 103. Effective and failure rates of birth control including condoms were included in the HIV/STD and teen pregnancy unit.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 172 | 64.7 |
| No | 94 | 35.3 |
| Total | 266 | 100.0 |

Table 104. Risks of oral sex were included in the HIV/STD and teen pregnancy unit.

| Response | Response | Percent |
| :--- | ---: | ---: |
| Yes | 137 | 51.3 |
| No | 130 | 48.7 |
| Total | 267 | 100.0 |

Table 105. Risks of anal sex were included in the HIV/STD and teen pregnancy unit.

| Response | Response | Percent |
| :--- | ---: | ---: |
| Yes | 109 | 41.0 |
| No | 157 | 59.0 |
| Total | 266 | 100.0 |

The last time teachers taught the HIV/STD and teen prevention unit, abstinence until marriage ( $95.5 \%$ ), transmission and prevention of HIVIAIDS (93.6\%), transmission and prevention of STDs (92.9\%), and how to deal with pressures to have sex ( $88.4 \%$ ) were most often included. Least cited by teachers were classroom demonstrations for condom use (6.4\%), written/verbal instructions for condoms (14.3\%), how to use birth control (21.4\%), and where to get birth control (27.1\%).

## Question 19. Would you like to receive staff development in each of these health topics?

Table 106. Teachers who would like to receive staff development in understanding the state law on sexuality education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 209 | 76.8 |
| No | 63 | 23.2 |
| Total | 272 | 100.0 |

Table 107. Teachers who would like to receive staff development in improving their comfort level teaching sexuality education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 149 | 55.4 |
| No | 120 | 44.6 |
| Total | 269 | 100.0 |

Table 108. Teachers who would like to receive staff development in holding a public hearing.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 54 | 20.1 |
| No | 214 | 79.9 |
| Total | 268 | 100.0 |

Table 109. Teachers who would like to receive staff development in understanding the federal abstinence guidelines.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 172 | 63.9 |
| No | 97 | 36.1 |
| Total | 269 | 100.00 |

Table 110. Teachers who would like staff development in training in an evidence-based curriculum.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 149 | 56.0 |
| No | 117 | 44.0 |
| Total | 266 | 100.0 |

Teachers report an interest in receiving staff development in understanding the state law on sexuality education (76.8\%), understanding federal abstinence guidelines (63.9), in training in an evidence-based curriculum (56.0\%), and in improving their comfort level teaching sexuality education (55.4).

Question 20. Typically, how much time is devoted to teaching abstinence until marriage as a stand alone sexuality education unit during the course of the semester?

Table 111. Time devoted to teaching abstinence in a semester.

|  | Response | Percent |
| :--- | ---: | ---: |
| None | 23 | 8.4 |
| One class period | 36 | 13.2 |
| Several class periods | 120 | 44.0 |
| One week per semester | 62 | 22.7 |
| One hour per week for one quarter <br> (9hrs) | 10 | 3.7 |
| One hour per week for half of the <br> school year (18 hrs) | 4 | 1.5 |
| One hour per week for the entire <br> school year (36 hours) | 1 | .4 |
| Abstinence until marriage is <br> integrated into other units | 17 | 6.2 |
| Total | 273 | 100.0 |

Forty-four percent of lead health education teachers report that several class periods in a semester are devoted to teaching abstinence until marriage as a stand alone sexuality education unit. One week per semester (22.7\%) was the second most frequent time selected by teachers.

Question 21. Does your school have active (parent/guardian must give permission) or passive (parent/guardian must opt out) parental consent for sexuality education?

Table 112. Type of consent for sexuality education.

|  | Respons <br> e | Percent |
| :--- | ---: | ---: |
| Active | 134 | 49.6 |
| Passive | 136 | 50.4 |
| Total | 270 | 100.0 |

Fifty percent of the lead health education teachers report that there is a passive parental consent for sex education and $49.6 \%$ report an active form.

Question 22. Typically, how many students in your classes opt out of sexuality education each semester?

Table 113. Students who opt out of sexuality education each semester.

|  | Response | Percent |
| :--- | ---: | ---: |
| None | 107 | 39.5 |
| One | 53 | 19.6 |
| Two | 35 | 12.9 |
| Three | 28 | 10.3 |
| Four | 11 | 4.1 |
| Between five and ten | 28 | 10.3 |
| More than 10 | 9 | 3.3 |
| Total | 271 | 100.0 |

Approximately 40\% of lead health education teachers report that no students drop out of sex education classes during a semester, 20\% report only one student and $3.3 \%$ report that more than ten students opt to do so.

Tobacco Policies and Programs

Tobacco is the leading preventable contributor to adult death in the United States and the vast majority of smokers begin smoking before the age of eighteen. Schools have a unique role in preventing tobacco use through education and tobacco free school policies.

Question 23. During this school year, did teachers in this school teach each of the following tobacco use topics in a required health education course for students in any of grades 6 through 12?

Table 114. Short term and long term health consequences of cigarette smoking (such as stained teeth, bad breath, heart disease, and cancer).

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 91 | 91 | 100 |
| Middle School | 128 | 127 | 99 |
| Junior/Senior Combined | 10 | 10 | 100 |
| Total | 229 | 228 | 100 |

Table 115. Benefits of not smoking cigarettes including long term and short term health benefits, environmental benefits, and financial benefits.

|  | Number | Response | Percent |

| Junior/Senior Combined |  |  |  |
| Total | 272 | 202 | 74 |

Table 141. Tobacco prevention taught in family life education or life skills.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 87 | 46 | 53 |
| Middle School | 147 | 52 | 35 |
| Junior/Senior Combined |  |  |  |
| Total | 242 | 101 | 42 |

Table 142. Tobacco prevention taught in special education.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 87 | 30 | 34 |
| Middle School | 147 | 28 | 19 |
| Junior/Senior Combined |  |  |  |
| Total | 242 | 59 | 24 |

Table 143. Tobacco prevention taught in social studies.

|  | Number | Response | Percent |
| ---: | ---: | ---: | ---: |
| High School | 87 | 8 | 9 |
| Middle School | 146 | 10 | 7 |
| Junior/Senior Combined |  |  |  |
| Total | 241 | 19 | 8 |

Lead health education teachers report tobacco prevention units or lessons are taught at the middle school level in physical education (69\%), family life education or life skills (35\%), and science courses (27\%) primarily. Tobacco prevention lessons are less frequently taught in special education (19\%), or social studies (7\%) as reported by teachers. At the high school level, tobacco prevention units or lessons are taught in physical education (69\%) and family life education or life skills (35\%).

Question 26. Does your school provide referrals to tobacco cessation programs for each of the following groups?

Table 144. Tobacco cessation programs for faculty/staff.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 43 | 15.8 |
| No | 229 | 84.2 |
| Total | 272 | 100.0 |

Table 145. Tobacco cessation programs for students.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 99 | 36.3 |
| No | 174 | 63.7 |
| Total | 273 | 100.0 |

Fifteen percent of lead health education teachers report that tobacco cessation programs are available to faculty and staff and 36.3\% report that it is available to students in their schools.

Question 27. Are there student groups operating in your school that work to support tobacco use prevention and cessation?

Table 146. Student groups that support tobacco use prevention and cessation.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 61 | 22.2 |
| No | 214 | 77.8 |
| Total | 275 | 100.0 |

Lead health education teachers (22.2\%) report that student groups work to support tobacco use prevention and cessation in their schools.

Question 28. Do you think that your school would benefit if your school district adopted a 100\% Tobacco Free School policy, meaning tobacco use is prohibited by everyone at all times on school property and at school-related events?

Table 147. School benefit if Tobacco Free policy is adopted.

| Response | Response | Percent |
| :--- | ---: | ---: |
| Already 100\% | 160 | 58.0 |
| Tobacco Free School |  |  |
| Yes | 89 | 32.2 |
| No | 27 | 9.8 |
| Total | 276 | 100.0 |

Fifty-eight percent of lead health education teachers report that their school is a Tobacco Free School. Of those schools without a Tobacco Free School policy, 32.2\% of the teachers report that the Tobacco Free School policy would benefit their school. Only $9.8 \%$ of teachers did not think their school would benefit from the adoption of this policy.

## Nutrition Education

Schools can play an important role in influencing student's eating patterns. Nutrition policies can help ensure that eating habits will contribute to students' learning achievement and lifelong good health. Nutrition policies should address comprehensive, integrated nutrition education; the school meals program; and food choices outside of the cafeteria such as vending machines, school stores, classroom celebrations, meetings, concessions and fundraisers.

Question 29. During this school year, did teachers in this school teach each of the following nutrition and dietary topics in a required health education course for students in any of grades 6 through 12?

Table 148. Teachers teach the benefits of healthy eating.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |

| :--- | ---: | ---: | ---: |
| High School | 92 | 89 | 96 |
| Middle School | 126 | 118 | 94 |
| Junior/Senior Combined | 10 | 9 | 90 |
| Total | 228 | 216 | 95 |

Over $90 \%$ of middle school lead health education teachers report including the benefits of healthy eating, the Food Guide Pyramid, using food labels, aiming for a healthy weight, choosing a variety of fruits and grains, diets low in saturated fats and cholesterol, moderating intake of sugars, healthy snacks and meals, unhealthy weight control practices, accepting body size, and eating disorders in a required health education course. These topics are reported at slightly higher percentages at the middle school than at the high school levels. Topics least likely to be taught are keeping foods safe to eat (overall 81\%) and calcium rich foods (overall 87\%).

## Physical Education

Physical education is defined as instruction that helps students develop the knowledge, attitudes, motor skills, behavioral skills, and confidence needed to adopt and maintain a physically active lifestyle. With the current epidemic of diabetes and obesity, physical education policies and practices can help ensure physically active students and physically active adults.

Question 30. During this school year, did teachers in this school teach each of the following physical activity topics in a required health education course for students in any of grades 6 through 12?

Table 163. The physical, psychological, or social benefits of physical activity.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |

| Junior/Senior Combined | 10 | 10 | 100 |
| Total | 228 | 210 | 92 |

Over $90 \%$ of lead health education teachers in the middle school report including the physical, psychological, or social benefits of physical activity, health related fitness, phases of a workout, decreasing sedentary activities, and preventing injury in a required health education course. At the high school level, over $90 \%$ of lead health education teachers report including the physical, psychological, or social benefits of physical activity, heath related fitness, phases of a workout, decreasing sedentary activities, preventing injury during physical activity, weather related safety, and the dangers of using performance-enhancing drugs. The two topics less frequently taught in both middle and high school include monitoring progress toward reaching goals in an individualized physical activity plan (77\%) and developing an individualized physical activity plan (80\%).

Question 31. For the following grades at this middle school, how many semesters/weeks per year are students required to take physical education?

Table 175. Time sixth graders are required to take physical education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Physical Education Not Taught | 1 | .6 |
| Less Than Nine Weeks | 2 | 1.2 |
| 9 Weeks | 23 | 14.1 |
| 1 Semester | 72 | 44.2 |
| 2 Semesters | 65 | 39.9 |
| Total | 163 | 100.0 |

Table 176. Time seventh graders are required to take physical education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Less Than Nine Weeks | 4 | 2.3 |
| 9 Weeks | 24 | 14.0 |
| 1 Semester | 76 | 44.2 |
| 2 Semesters | 68 | 39.5 |
| Total | 172 | 100.0 |

Table 177. Time eighth graders are required to take physical education.

|  | Response | Percent |
| :--- | ---: | ---: |
| Less Than Nine Weeks | 5 | 2.9 |
| 9 Weeks | 24 | 14.0 |
| 1 Semester | 79 | 45.9 |
| 2 Semesters | 64 | 37.2 |
| Total | 172 | 100.0 |

Of the middle school lead education health teachers, 44-45\% report that sixth, seventh, and eighth graders take one semester of physical education.

Almost 40\% of students take two semesters of physical education each year. Between one and three percent of teachers report that physical education is taught fewer than nine weeks.

Question 32. During those semesters/weeks, how many days per week are students required to take physical education?

Table 178. Days per week sixth graders are required to take physical education.

| Response-Yes | Response | Percent |
| :--- | ---: | ---: |
| Physical Education Not Taught | 1 | .6 |
| 1 Day Per Week | 1 | .6 |
| 2 Days Per Week | 18 | 11.1 |
| 3 Days Per Week | 45 | 27.8 |
| 4 Days Per Week | 6 | 3.7 |
| 5 Days Per Week | 91 | 56.2 |
| Total | 162 | 100.0 |

Table 179. Days per week seventh graders are required to take physical education.

|  | Response | Percent |
| :--- | ---: | ---: |
| 1 Day Per Week | 1 | .6 |
| 2 Days Per Week | 21 | 12.4 |
| 3 Days Per Week | 47 | 27.6 |
| 4 Days Per Week | 6 | 3.5 |
| 5 Days Per Week | 95 | 55.9 |
| Total | 170 | 100.0 |

Table 180. Days per week eighth graders are required to take physical education.

|  | Response | Percent |
| :--- | ---: | ---: |
| 1 Day Per Week | 1 | .6 |
| 2 Days Per Week | 20 | 11.9 |
| 3 Days Per Week | 45 | 26.8 |
| 4 Days Per Week | 7 | 4.2 |
| 5 Days Per Week | 95 | 56.5 |
| Total | 168 | 100.0 |

During the semesters/weeks that physical education is required, sixth graders are required to take the class five days per week (56.2), seventh graders are required to take the class five days per week (55.9), and eighth graders are required to take the class five days per week (56.5). Approximately one-fourth of students take the class only three days per week. Less than $1 \%$ of students take the class only one day per week.

## Question 33. At this high school, how many total credits of physical education are required to graduate?

Table 181. Number of credits of physical education required for graduation.

|  | Response | Percent |
| :--- | ---: | ---: |
| $\mathbf{0}$ Credits (0 hours) | 1 | .8 |
| $\mathbf{1 / 2}$ Credit (75 hours) | 62 | 47.3 |
| 3/4 Credit (112 hours) | 8 | 6.1 |
| $\mathbf{1}$ Credit (150 hours) | 57 | 43.5 |
| 1 1/2 Credits (225 <br> hours) | 1 | .8 |
| $\mathbf{2}$ Credits (300 hours) | 2 | 1.5 |
| Total | 131 | 100.0 |

Of the lead health education teachers, $47 \%$ reported that only $1 / 2$ credit and 43.5 reported that one credit of physical education is required for graduation from their high school.

## Indoor Air Quality (IAQ) and Mold Growth Prevention

Studies have shown that poor indoor air quality (mold is a subset of IAQ) in schools can have a negative impact on the student's learning experience. Poor IAQ can also contribute to aggravation of asthma and allergy like symptoms. Therefore, it seems prudent to implement proactive programs to better design schools, to evaluate the design of existing schools, to review the operation of building systems, and to assure the proper maintenance of these systems.

Question 34. Is this a clean school and are there signs of water damage, i.e. water-stained ceiling tiles?

Table 182. Teachers who report that their school is clean.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 228 | 82.6 |
| No | 48 | 17.4 |
| Total | 276 | 100.0 |

Table 183. Teachers who report signs of water damage.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 136 | 51.1 |
| No | 130 | 48.9 |
| Total | 266 | 100.0 |

Eighty-two percent of lead health education teachers report that their school is clean and $51.1 \%$ of them report signs of water damage in their schools.

## Medical Emergency Preparedness

A group of leading national organizations (including the American Heart Association, American Academy of Pediatrics, and the National Association of School Nurses) recently recommended that schools develop a medical emergency response plan for cardiac arrest and other life-threatening medical emergencies. The recommended elements of such a plan were 1)effective and efficient communication throughout the school campus, 2)coordinated and practiced response plan, 3)risk reduction, 4) training and equipment for first aid and CPR (cardiopulmonary resuscitation), and 5) implementation of a lay rescuer AED (automated external defibrillator) program in schools with an established need.

Question 35. During this school year, have teachers in this school tried to increase student knowledge on each of the following topics in any health education or physical education courses in any of grades 6 through 12?

Table 184. Teachers increase student knowledge of heart disease and stroke prevention.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 252 | 91.3 |
| No | 4 | 8.7 |
| Total | 276 | 100.0 |

Table 185. Teachers increase student knowledge of high blood pressure prevention.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 243 | 88.0 |
| No | 33 | 12.0 |
| Total | 276 | 100.0 |

Table 186. Teachers increase student knowledge of high cholesterol prevention.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 235 | 85.8 |
| No | 39 | 14.2 |
| Total | 274 | 100.0 |

Table 187. Teachers increase student knowledge of the signs and symptoms of a stroke.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 216 | 79.1 |
| No | 57 | 20.9 |
| Total | 273 | 100.0 |

Table 188. Teachers increase student knowledge of the signs and symptoms of a heart attack.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 231 | 84.9 |
| No | 41 | 15.1 |
| Total | 273 | 100.0 |

Table 189. Teachers increase student knowledge of how to treat a stroke as a medical emergency.

|  | Response | Percent |
| :--- | ---: | ---: |
| Yes | 210 | 76.9 |
| No | 63 | 23.1 |
| Total | 273 | 100.0 |

Table 190. Teachers increase student knowledge of how to treat a heart attack as a medical emergency.

| Response | Response | Percent |
| :--- | ---: | ---: |
| Yes | 221 | 81.0 |
| No | 52 | 19.0 |
| Total | 273 | 100.0 |

Table 191. Teachers increase student knowledge of how to use an automated external defibrillator.

| Response | Response | Percent |
| :--- | ---: | ---: | ---: |
| Yes | 89 | 32.8 |
| No | 182 | 67.2 |
| Total | 271 | 100.0 |

During this school year, the percent of lead health education teachers who report increasing student knowledge of heart disease and stroke prevention is $91.3 \%$, high blood pressure prevention $88 \%$, high cholesterol prevention $85.8 \%$, and the signs and symptoms of a heart attack $84.9 \%$. A lesser percentage of teachers report increasing student knowledge and use of an automated external defibrillator (32.8), how to treat a stroke as a medical emergency (76.9\%) and the signs and symptoms of a stroke (79.1\%).

## School Connectedness

School connectedness is a protective factor for many youth risk behaviors. Schools that offer multi-component health prevention which includes the community and a strong educational element are more likely to have students that can avoid risk behaviors.

## Question 36. Does your school offer any health-related extracurricular activities for students?

Table 192. Schools with health-related extracurricular activities.

| Response | Response | Percent |
| :--- | ---: | ---: |
| Yes | 139 | 50.4 |
| No | 137 | 49.6 |
| Total | 276 | 100.0 |

Fifty percent of lead health education teachers report that their schools offer health-related extracurricular activities for students.

Professional Collaboration

There is a growing understanding that piecemeal, competitive, or uncoordinated efforts to address school health are counterproductive. Collaborative initiatives that organize and optimize resources should be the foundation and focus for over-all student well-being.

Question 37. During this school year, have any health education staff worked with each of the following groups on health education activities?

Table 193. Health education staff worked with physical education staff.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 107 | 91 | 84 |
| Middle School | 161 | 144 | 89 |
| Junior/Senior Combined |  |  |  |
| Total | 278 | 244 | 87 |

Table 194. Health education staff worked with school health services staff (e.g., nurses).

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 103 | 73 | 70 |
| Middle School | 159 | 120 | 75 |
| Junior/Senior Combined |  |  |  |
| Total | 272 | 198 | 73 |

Table 195. Health education staff worked with school mental health or social services staff (e.g., psychologists, counselors, and social workers).

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 104 | 68 | 65 |
| Middle School | 159 | 109 | 69 |
| Junior/Senior Combined |  |  |  |
| Total | 272 | 181 | 66 |

Table 196. Health education staff worked with food service staff.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 103 | 19 | 18 |
| Middle School | 157 | 49 | 30 |
| Junior/Senior Combined |  |  |  |
| Total | 268 | 69 | 25 |

Table 197. Health education staff worked with community members.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 104 | 61 | 58 |
| Middle School | 156 | 83 | 53 |
| Junior/Senior Combined |  |  |  |
| Total | 269 | 150 | 55 |

Table 198. Health education staff worked with teachers in other subject areas.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 103 | 63 | 60 |
| Middle School | 158 | 91 | 57 |
| Junior/Senior Combined |  |  |  |
| Total | 271 | 161 | 59 |

Middle school health education staff report working with physical education staff (89\%), school health services staff (75\%). Only thirty percent report working with food service staff. At the high school level, $84 \%$ work with physical education staff, $70 \%$ work with school health services staff, $65 \%$ work with mental health or social services staff, and $60 \%$ work with teachers in other subject areas. Only $18 \%$ of high school lead health education teachers work with food service staff.

Question 38. During this school year, has the school done each of the following activities?

Table 199. The school provided families with information on the health education program.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 107 | 79 | 73 |
| Middle School | 158 | 119 | 76 |
| Junior/Senior Combined |  |  |  |
| Total | 275 | 205 | 75 |

Table 200. The school met with a parents' organization such as the PTA or PTO to discuss the health education program.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 108 | 29 | 27 |
| Middle School | 159 | 39 | 24 |
| Junior/Senior Combined |  |  |  |
| Total | 277 | 71 | 26 |

Table 201. The school invited family members to attend a health education class.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 108 | 44 | 40 |
| Middle School | 159 | 78 | 50 |
| Junior/Senior Combined |  |  |  |
| Total | 277 | 125 | 46 |

Approximately $75 \%$ of lead health education teachers at the middle and high school levels report providing families with information on their health education program. Forty to fifty percent of teachers report inviting family members to attend a health education class and nearly $25 \%$ have schools that met with a parent organization to discuss the health education program.

## Staff Development

Professional development that promotes and strengthens interdisciplinary collaboration and integration of services is one of the keys to school health education.

Question 39. During the past two years, did you receive staff development (such as workshops, conferences, continuing education, or any other kind of in-service) on each of the following health education topics?

Table 202. Staff development received on accidents or injury prevention.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 107 | 45 | 42 |
| Middle School | 157 | 63 | 40 |
| Junior/Senior Combined |  |  |  |
| Total | 274 | 113 | 41 |

Table 203. Staff development received on alcohol or other drug use prevention.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 106 | 37 | 36 |

| Middle School | 158 | 61 | 38 |
| Junior/Senior Combined |  |  |  |
| Total | 275 | 99 | 36 |

During the past two years middle school teachers report receiving a variety of workshops, conferences, continuing education or in-service programs most frequently in CPR (61\%), first aid (54\%), accident or injury prevention (42\%), and HIV (40\%). Middle school teachers were less likely to report staff development on death and dying (5\%), dental and oral health (6\%), consumer health and death and dying (7\%), sun safety ( $9 \%$ ), and suicide prevention (8\%). At the high school level, lead health education teachers report receiving a variety of staff development in CPR (61\%), first aid (57\%), accident or injury prevention (42\%), and HIV (37\%). These teachers reported less training in dental and oral health (4\%), personal hygiene (5\%), death and dying (6\%), and sun safety and environmental health (9\%).

## Question 40. Would you like to receive staff development on each of these health education topics?

Table 224. Teachers want accident or injury prevention staff development.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 107 | 44 | 41 |
| Middle School | 159 | 82 | 51 |

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 107 | 76 | 71 |
| Middle School | 159 | 120 | 76 |
| Junior/Senior Combined |  |  |  |
| Total | 276 | 202 | 74 |

Middle school lead health education teachers report an interest in having staff development in emotional and mental health (64\%), alcohol or drug use prevention (68\%), CPR and first aid (71\%), and violence prevention (76\%). Less interest at this level is reported in the areas of personal hygiene (42\%), dental and oral health (40\%), and immunizations and vaccinations (38\%). High school lead health education teachers report interest in staff development for alcohol and other drug use prevention ( $75 \%$ ), violence prevention ( $71 \%$ ), nutrition and dietary behavior and STD (69\%). Less interest is shown for staff development for high school teachers in the areas of dental and oral health and growth and development (33\%), personal hygiene (34\%), immunizations (35\%), and environmental health (39\%)

Question 41. During the past two years, did you receive staff development (such as workshops, conferences, continuing education, or any other kind of in-service) on each of the following teaching methods?

Table 246. Teaching students with physical or cognitive disabilities.

|  | Number | Response | Percent |
| :--- | ---: | ---: | ---: |
| High School | 108 | 48 | 44 |
| Middle School | 156 | 78 | 51 |
| Junior/Senior Combined |  |  |  |
| Total | 274 | 133 | 49 |

| Total | 272 | 198 | 73 |

Middle grades lead health education teachers report an interest in receiving staff development in teaching methods such as working with students to produce behavior change (74\%), with limited English proficiency students (73\%), and with cognitive or physically disabled students (68\%). High school teachers report an interest in staff development for teaching skills for behavior change (71\%), teaching students with physical or cognitive disabilities (67\%), and teaching students with limited English proficiency (64\%). Both groups reported similar needs.

## Professional Preparation

Professional pre-service and graduate programs aim to prepare practitioners for specific services. Based on this preparation a training plan can be developed to maximize professional development for all staff.

Question 43. What was the major emphasis of your professional preparation?

Table 258. Major professional preparation in health and physical education combined.

| High School | Number | Response | Percent |
| ---: | ---: | ---: | ---: |
| Middle School | 149 | 69 | 61 |
